

It's Green Made time

It's Green Made time

What does Green Made mean?

Green made means thinking, developing and manufacturing in harmony with our environment. Whenever our Designers are planning a new product, their first thoughts are addressed to nature, which they draw their inspiration and creative passion from.

Certified environmental management system UNI EN ISO 14001:2015

Green Made: values

While ideas are transformed into forms, we start looking at the manufacturing process.

Each step is carefully checked with regards to the environmental impact and each following decision is taken if our eco-compatibility objectives are fully reached.

*This means that when we manufacture our products, the **Green Made** concept by **Colombo Design** will be assured by the advanced technologies and very strict controls carried out by a very highly qualified personnel, generating a product conceived constantly thinking of the environment.*

Green Made: why

Protecting our resources is more and more important in a global economy, in particular paying attention to reflections of manufacturing onto the environment. Increase of consumptions of non-renewable resources (minerals, metals and fossil combustibles) due to increase of population, imposes manufacturing standards privileging conservation of the available resources and raw materials.

*Our manufacturing process are the results of our global attention to environment protection, as evidenced by the **UNI EN ISO 14001:2015** certification.*

Green Made: facts

METHANE: 18% consumption saving between 2005 and 2008

NICKEL: 12% saving of nickel used in plating

POWDERS: our release of powders in the atmosphere is significantly lower if compared to quantities ruled and accepted by current laws.

LACQUERING: the new PVD vacuum operating equipment drastically reduces the impact on the environment, guaranteeing no harmful emission into the atmosphere. The use of thinners is totally eliminated.

WASH-UP: a new equipment uses detergents instead of trichloroethylene, thus generating no harmful emission into the atmosphere.

WATERS: water flowing back is daily and constantly monitored thanks to an "automatic sampler", fully respecting the strict current law regulations.

PACKAGING: our recyclable-waste collection considerably reduces the numbers of packaging to be collected, thanks to paper, wood and plastic recycling. We do not use any polystyrene or similar material in the finished product packaging.
